

Role: Data Model Analyst

Contract: Permanent

Location: Bank, London

Salary: £25k - £28k

THE COMPANY

We are a fast-growing technology company with offices in London and Manhattan, dealing with great clients across the globe.

Our product uses artificial intelligence techniques to capture data from unstructured documents such as pdf's, spreadsheets and emails.

Our parsing technology provides efficiencies and auditability to repetitive tasks which would normally require the time-consuming manual extraction of data.

We are looking for bright, personable graduates who have a genuine interest in problem solving to join our growing team. Initial duties are outlined below, but the successful candidate will be able to define their own role as the company grows.

THE ROLE

Responsibilities:

- Using the Semantic Extract platform to automate data extraction from financial documents.
- Extract relevant data across global markets on a technology-based solution.
- Participating in software testing and specification of enhancements.
- Liaising with clients and supporting client inquiries.
- Project Management

Skills / Education

- Good degree in a scientific, quantitative or financial discipline.
- Good Microsoft Excel skills.
- Good communication skills.
- Attention to detail and well-organised thinking.
- Financial knowledge / interest an advantage.
- Atlassian collaboration tools.

Candidates should be able to start within four weeks and be eligible to work in the UK without visa sponsorship. A valid passport is required as the role may require overseas travel. This is a fantastic opportunity for someone looking to join a successful and supportive company that is committed to the training and development of its employees.

To apply for this role, please submit your CV along with a cover letter to:
